ATITIE: The complete genome of the hyperthermophilic bacterium Aquifex aeolicus. A,Reference number: A70300, MUID:98196666
A,Racession: D70437
A,Status: preliminary; nucleic acid sequence not shown; translation not shown A,Rolecule type: DNA
A,Residues: 1-185 cAQPA
A,Cross-references: GB.AE000746; NID:92983925; PIDN:AAC07478.1; PID:92983929; GB.AE0
A,Experimental source: strain VF5

Cispecies: S31851, S31851, Wharam, S.; Gibson, M.; Allison, G.; Bunce, N.; Baral
Mol. Microbiol. 8, 443-456, 1993
A.Title: Molecular cloning and characterization of 13 out genes from Erwinia carctory
Dacteria.
A.Reference number: S32857; MUID:93316842
A.Recession. S32862
A.Status: preliminary: nucleic acid sequence not shown; translation not shown
A.Residues: 1-188 cREE>
A.Residues: 1-188 cREE>
A.Residues: 1-188 cREE>
A.Rote: the nucleotide sequence was submitted to the EMBL Data Library, /./
                                    A;Description: hydrolyzes penicillins G and V into fatty acid and 6-aminopenicillani. C;Superfamily: penicillin amidase
C;Keywords: antibiotic resistance; hydrolase; penicillin resistance
F;1-26/Domain: signal sequence #status predicted <SIG>
F;27-846/Product: penicillin amidase zymogen #status predicted <PRO>
F;290-846/Product: penicillin amidase heavy chain #status predicted <MPT>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                R;Deckert, G.; Warren, P.V.; Gaasterland, T.; Young, W.G.; Lenox, A.L.; Graham, D.E.

REQUIRED FOR STRUCTURAL INTEGRATY OF INNER EAR HAIR CELLS (BY SIMILARITY).
-i- DISEASE: Defects in MYO6 are the cause of an autosomal dominant form of nonsyndromic sensorineural deafness (DFNA22). The deafness is progressive and postlingual, with onset during childhood (8 to 10 years of age at onset of symptoms; 6 to 8 years of age at onset of first audiometric abnormalities). By the age of approximately

The hPSP DNA is useful for chromosome identification and isolation of the corresponding genomic DNA. The DNA and protein can be used to detect abnormal levels of hPSP (in standard blotting, amplification or immuno assays), particularly for diagnosis of digestive, non-immune defensive, endocrine or immune system disorders. A particular application is diagnosis of cancers of the salivary gland, thymus and pancreas which are associated with high levels of hPSP. The protein is also useful as antifungal, antibacterial, antiparasitic and antiviral agents and may be expressed in vivo from the DNA. The protein, or cells expressing it, are used in screening tests to identify specific acids, which are potentially useful for treating conditions associated with are potentially useful for treating conditions associated with excessive hPSP production. Cells containing the DNA are used to express the recombinant protein and this can be used to raise Ab, useful for diagnosis, therapy, for affnity purification and to identify

This represents a human parotid secretory protein (HPSP). Antagonists that bind specifically to, and modulate activity of HPSP are used to treat cancer and autoimmune diseases particularly of secretory or gastrointestinal tissue, e.g. cancer of salivary gland, thyroid, castrointestinal tissue, e.g. cancer of salivary gland, thyroid, crows disease, thyroiditis, insulin-dependent diabetes, pancreatis, of saves disease, thyroiditis, insulin-dependent diabetes, pancreatitis, ulcerative colitis, Crohn's disease and atrophic gastrifis, Host ceils to containing expression vectors comprising the HPSP nucleic acid are used to produce recombinant HPSP which is used to generate antibodies and to screen for its antagonists. Antibodies are useful directly as antagonists to monitor patients being treated with HPSP, and for purification of HPSP from natural sources. Expression of HPSP may indicate cell proliferation. HPSP nucleic acid or its fragments are used to detect HPSP-encoding sequences (optionally after amplification by PCR) by hybridisation, particularly for diagnosis and monitoring of disease, but also for mapping the chromosomal sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human; tumour; diagnosis; neoplastic disease; neoplastic cell growth;

Exemplary conditions or disorders to be treated with such antibodies and other compounds include benign or malignant tumours (e.g., renal, liver, kidney, bladder, breast, gastric, ovarian, colorectal, prostate, pancreatic, lung, vulva, thyroid, hepatic carcinomas, sarcomas, glioblastomas, and various head and neck tumours), leukaemias and lymphoid malignancies, other disorders such as neuronal, glial, astrocytal, hypothalamic and other glandular, macrophagal, epithelial stronal and blastocoelic disorders, and inflammatory, andiogenic and immunologic disorders. AAC58242 to AAC5836 represent PCR primers and hybridisation probes used in the isolation of the human PRO sequences. AAC58367 to AAC58367 represent human

```
This sequence represents a human secreted protein amino acid sequence.
The invention relates to sequences AAA87725 x88774 which encode human
secreted proteins AAB2703-B25812. The proteins include signal peptides.
Included in the invention are a host cell containing one of the CDNA sequences, and a purified antibody capable of binding to one of the CDNA sequences to binding to one of the Storing the sequence data on a computer system, and a method for accreted proteins. Also contained in the invention are methods for storing the sequence data on a computer system, and a method for admitivying features of the CDNA sequences using a computer programme.
The CDNAs are useful for expressing secreted proteins or fragments to obtain antibodies capable of specifically binding to the secreted proteins and any and chromosome mapping procedures and may be used to design expression vectors and secretion vectors. The proteins of the invention expression vectors and secretion vectors. The proteins of the invention disorders, amyloidosis, brain disorders, skeletal muscle disorders, eye disorders, and impotence.

C dementia, hyperlipidaemia, septic shock and impotence.
                                                                                                                                                                                                                                                                                                    Polynucleotides and polypeptides encoding proteins with signal peptides, useful in diagnostic, forensic, gene therapy and chromosome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (1) and and a sequences given in AAM82170 to AAM91921. (1) have cytostatic activity, and can be used in gene therapy and vaccine production. (1) proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (1) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome expression by rectifying mutations or deletions in a patient's genome supplement the patients on production of (1). Additionally, (1) polynucleotides may be used to produce the secreted (1), by inserting the nucleic acids into a host cell and culturing the cell to express the

```
protein. (I) proteins and polynucleotides may be used to prevent, diagnose and treat immune/haematopoietic related diseases, especially cancers and cancer metastases of haematopoietic derived cells. AAK64703 to AAK87594 represent human immune/haematopoietic antigen genomic sequences from the present invention. AAK54942 to AAK54950 and AAM82169 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AAD08488-AAD08529 represent cDNAs corresponding to 18 human secreted protein genes, and AAE04199-AAE04239 represent the proteins they encode. AAE04240-AAE04297 represent human secreted protein fragments or variants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 foetal abnormality; developmental abnormality; haematopoietic disorder; immune system disorder; AIDS; autoimmune disease; rheunatoid arthritis; inflammation; allergy; neurological disorder; Alzheimer; asthma; skin disorder; psordase; cognitive disorder; schizophrenia; asthma; skin disorder; psordasis; sepeis; diaberes; etheroselerosis; cardiovasqular disorder; pregnancy-related disorder; gene therapy; enforcer; infection; wound healing; vulnerary; cell culture; chemotaxis; food additive;

The secreted proteins and their genes are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy. Pathological conditions can be disposed by determining the amount of the new protein in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the 18 genes, based on the tissues in which they are most highly expressed, and include developing products for the disposis or treatment of proliferative disorders, cancer, tumours, foetal and developmental abnormalities, haematopoietic disorders, diseases of the immune system, AIDS, autoimmune diseases (e.g., rheumatoid arthritis), inflammation, allergies, neurological disorders (e.g., Alzheimer's disease, parkinson's disease, conquitive disorders, schizophenia, asthma, skin disorders (e.g., psoriasis), sepsis, diabetes, atherosclerosis, cardiovascular disorders, anglogenic disorders, skindney disorders, cardiovascular disorders, anglogenic disorders, skindney disorders.
                                                                                                                                                                                                                                                                                                                                        gastrointestinal disorders, pregnancy related disorders, endocrine disorders, and infections. The proteins can also be used to aid wound healing and epithelial cell proliferation, to prevent skin ageing due to subburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues, to identify their cognate ligands or binding partners, and in chemotaxis, and can be used as a food additive or preservative to modify storage properties. Antibodies specific for a protein of the invention can be used in alleviating symptoms associated with the disorders mentioned above, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       foetal abnormality; developmental abnormality; haematopoietic disorder; immune system disorder; AIDS; autoimmune disease; rheumatoid arthritis; inflammation; allergy; neurological disorder; Alzheimer's disease; Parkinson's disease; cognitive disorder; schizophrenia; asthma; skin disorder; psoriasis; sepsis; diabetes; atherosclerosis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          in diagnostic immunoassays e.g., radioimmunoassay or enzyme linked immunosorbent assay (ELISA). The present sequence represents a human secreted protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     cardiovascular disorder; angiogenic disorder; kidney disorder; gastrointestinal disorder; pregnancy related disorder; gene therapy; endocrine disorder; infection; wound healing; vulnerary; cell culture; chemotaxis; food additive;

                                                                                                                                                                                                                                                                                                        AAD08488-AAD08529 represent cDNAs corresponding to 18 human secreted protein genes, and AAE04199-AAE04239 represent the proteins they encode. AAE04240-AAE04297 represent human secreted proteins and their genes are useful for preventing. The secreted proteins and their genes are useful for preventing. The secreted proteins and their genes are useful for preventing. The secreted proteins and their genes are useful for preventing. The treating or ameliorating medical conditions, e.g., by protein or gene therapy. Pathological conditions can be diagnosed by determining the presence of mutations in the new genes. Specific uses are described for each of the mutations in the new genes. Specific uses are described for each of the and include developing products for the diagnosis or treatment of and include developing products for the diagnosis or treatment of abnormalities, haematopoietic disorders, diseases of the immune system, and include developing products for the diagnosis or treatment of abnormalities, neurological disorders, disorders, diabetes, atherosclerosis, allergies, neurological disorders (e.g., Alzheimer's disease, partnam, alsorders, endocrine alsorders, and infections. The proteins can also be used to aid wound disorders, and infections. The proteins can also be used to aid wound sastrointestinal disorders, prequency related disorders, endocrine can animal organs before transplantation, for supporting coll collure of primary tissues, to regenerate tissues, to identify their cognate ligands or binding partners, and in chemotaxis, and can be used in as a food additive or preservative to modify storage properties.

Antibodies specific for a protein of the invention can be used in allerating symptoms associated with the disorders mentioned above, and in diagnostic immunososays or enzyme linked immunososays or enzyme linked invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; primer; detection; diagnosis; antisense therapy; gene therapy.

polynucleotide which comprises a 3' end sequence, where the oligonucleotide comprises at least 15 nucleotides and the combination of the 5' end sequence/3' end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention describes primer sets for synthesising 5602 full-length CDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polyucisetide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides: or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5 -end sequence and an oligonucleotide comprising a sequence complementary to a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH13628 and AAH3633 to AAH1362 represent human cDNA sequences; AAB92446 to AAH3639 represent human amino acid sequences; and AAH3639 to AAH33632 represent oligonucleotides, all of which are used in the exemplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This sequence represents the protein encoded by the human SH3DIA CDNA clone 9 (see AA24574). SH3DIA contributes to the development of platelets and the pathogenesis of leukaemias, both in general and in particular those involving the megakaryocytic lineage. The cromosome 21. The protein includes SH3 domains and EH4 domains, both associated with protein-protein interactions and the latter chromosome 21. The protein-protein interactions and the latter with maintenance of the cytoskeleton. At least 3 isoforms of SH3DIA exist (see AA712154-58). The invention provides methods for the diagnosis and treatment of megakaryocytic abnormality, related alsorder, acute leukaemia, neural disorders, thromobocytopenia, platelet disorder on chromosome 21, low platelets in deletion for 21, association of chromosome 21, low platelets in deletion for 21, association of disorders including brain malformalities, dysfunctions and disorders including brain malformations and disorders and object half when the also provided: for suppressing and colpocephaly, methods are also provided: for suppressing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

```
The invention relates to primers for synthesising full length cDNA clones. 830 cDNA molecules encoding a human protein have been solated and nucleotide sequences of 5'- and 3'-ends of the cDNA molecules have been determined. Primers for synthesising the full length cDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA asily without any special methods. The present sequence is a polypeptide encoded by a full length human cDNA of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in CD-ROM format directly from EPO.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                830 Primers useful for synthesizing full length cDNA clones and their

polypeptide (11) sequences. (1) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The useful for chromosome polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (1) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   and to produce other types of data and products dependent on DNA and amino acid sequences. AGG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    cerebroprotective; nootropic; neuroprotective; antibacterial; virucide; fungicide; ophthalmological; cytostatic; immunosuppressive; nootropic; neuroprotective; antiallergic; hepatotropic; antidiabetic; antiinflammatory; antiulcer; vulnerary; anticonvulsant; antibacterial; antiparasitic; cardiant; gene therapy; cancer; immune disorder; cardiovascular disorder; neurological disease; infection; human.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; antiarthritic; antirheumatic; antiproliferative; vasotropic;
                                                                                                                                                                                                                                                                                                                                                                                 New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess

WPI; 2001-488781/53.

N-PSDB; AAI63825

New isolated nucleic acids and polypeptides, useful for diagnosing, treating and/or preventing human diseases and disorders -

Claim 11; SEQ ID NO 197; 664pp + Sequence Listing; English.

The invention relates to human polynucleotides (AA163803-AA164012) and the invention relates to human polynucleotides (AA16303-AA164012) and the encoded proteins (AAM34497-AAM3660) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes were isolated from a range of human tissues disclosed in the genes were isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists or are useful in the diagnosis, treatment and prevention of: (a) cancer, c.g. beest and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or uroganital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, c.c. croin's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colliss, (c) ardiovascular disorders such as myccardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal and parasitic infections.

Con the parasitic infections diseases such as viral, bacterial, fungal and parasitic infections.

Con the parasitic infections was obtained in electronic format directly from MIPO at ftp.WiPo.int/Published_pct_sequences.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 160,
